

HEIU B2 - Teacher Feedback Report

For: Callan (B2 Teacher) | From: Coordination | Confidential

Based on: Student exam data (B1 Final + B2 Midterm), daily self-assessments, and student feedback.

CONTEXT

Several B2 students have expressed frustration that they do not feel they are improving. Coordination has analyzed their exam data, self-assessments, and writing samples. This report presents the findings and explains why the structured activities in the class guides are essential to student progress.

Important: This report is not about blame. It is about evidence. The data shows that students ARE improving in some areas but NOT in others. The areas where they are NOT improving are exactly the areas that the skipped activities are designed to fix.

THE EVIDENCE: WHAT THE EXAMS SHOW

Case Study: Miguel Parra (representative of the group)

Area	B1 Final (Feb)	B2 Midterm (Apr)	Change
Listening	16.5/20 (82.5%)	18/20 (90%)	+7.5%
Reading	21/25 (84%)	27/30 (90%)	+6%
Writing	16.5/30 (55%)	19.5/30 (65%)	+10%
Speaking	Not evaluated	Pending	N/A
TOTAL (no speaking)	54/75 (72%)	64.5/80 (80.6%)	+8.6%

Conclusion: Miguel improved in ALL measurable areas. Listening +7.5%, Reading +6%, Writing +10%. Total score went from 72% to 80.6%. He IS learning. However...

THE PROBLEM: ERRORS THAT PERSIST

Despite improvement in scores, Miguel's B1 Final and B2 Midterm show **the exact same types of errors** in his writing. After two months of B2 classes, these errors have not been corrected:

Error Type	B1 Final (Feb)	B2 Midterm (Apr)
Prepositions	"about to live alone" "for do all our tasks"	"depends of" (should be ON) "thanks of" (should be TO) "specialized for" (should be IN)
Modal + verb	"had to used learn" "he had studying"	"could did the master" (should be DO) "could found" (should be FIND)
Noun vs adjective	"learnt to be patience" (should be PATIENT)	"lost her afraid" (should be FEAR)

These errors appeared in February and are STILL appearing in April. Two months of classes did not eliminate them. This means they are not being corrected frequently enough during conversation.

WHY THIS HAPPENS: FOSSILIZATION

When a student says "depends of" in conversation and no one corrects it, the student's brain registers "depends of" as correct English. Every uncorrected repetition reinforces the error. After hundreds of uncorrected repetitions across weeks and months, the error becomes permanent. Linguists call this **fossilization**.

Fossilization is especially dangerous for students who entered B2 with pre-existing English. They speak fluently enough to be understood, so they never get corrected. But "being understood" is not the same as "speaking correctly." A student who says "depends of" for years will ALWAYS say "depends of" — unless someone breaks the cycle with immediate, consistent correction.

The only way to break fossilization is: immediate correction in the moment it happens. "No. Listen. Depends ON." Every single time. Not once. Not sometimes. Every time.

WHY EACH ACTIVITY MATTERS

1. "Correct the Teacher" — Trains the ear to detect errors

This activity forces students to LISTEN actively for errors — including the types they make themselves. When Miguel hears "she could did the master" in a story and catches it as wrong, he is training his brain to catch "could did" when HE says it. The activity is not about the story — it is about rewiring the student's error detection system. A student who finds it "boring" has not been shown why it matters. These exam results are the proof.

2. Shadowing — Internalizes correct patterns through repetition

Miguel's listening comprehension is strong (90% on B2 midterm). But understanding English is not the same as producing it correctly. Shadowing trains the mouth and brain to reproduce correct patterns: "depends ON", "could DO", "patient not patience." When a student repeats a native speaker saying these correctly 20 times in a row, the correct pattern starts to override the fossilized error. Without this repetition, the error stays.

3. Structured Conversation WITH Correction — The teacher's core job

Free conversation without correction is a coffee chat — not a class. The difference between a native-speaker teacher and a native-speaker friend is that the teacher CORRECTS. Every time a student says "depends of" and the teacher says "No. Listen. Depends ON" — that is teaching. Every time a student says "depends of" and the teacher says nothing — that is a missed opportunity that reinforces the error.

THE COST OF NOT CORRECTING

Students are paying for expert instruction, not casual conversation. When correction activities are skipped or corrections are not given during conversation:

1. Errors fossilize and become permanent
2. Students don't FEEL they are improving (because they're not — in production)
3. Students complain that they "haven't learned anything"
4. Students lose trust in the academy
5. Students don't renew or recommend

This is exactly what is happening in B2 right now. The students' complaint is not that the classes are bad — it is that they don't feel the DIFFERENCE between class and a conversation with a friend. The correction is what makes it a class.

THE CONTRADICTION: WHAT STUDENTS WROTE vs WHAT THEY SAY NOW

Students rated classes 4-5 out of 5 on their daily self-assessments. They wrote "I feel good" consistently across 18 classes. They never expressed dissatisfaction in writing. Their exam scores show measurable improvement (+8.6% for Miguel, +19% for Sofia). And now they say they have not learned anything.

This disconnect is important. The students ARE improving (the numbers prove it), and they WERE satisfied (their self-assessments prove it). The frustration they feel now is not about learning — it is about **feeling** the learning. When errors go uncorrected, students do not feel the difference between class and casual conversation. Correction is what makes progress VISIBLE to the student.

When a student hears "No. Listen. Depends ON, not depends OF" — they feel something shift. They feel the correction. They feel the learning. Without that moment, they leave class thinking "we just talked" even if they actually improved. The correction is not just pedagogically necessary — it is what makes the student FEEL that they are getting value for their money.

WHICH ACTIVITIES FIX WHICH STUDENT ERRORS

Every activity in the guide targets specific, documented errors from student exams. This is not generic — these are errors YOUR students make:

Student Error	Who	Activity	Mechanism
Prepositions: "depends of", "thanks of", "responsible of"	Miguel, Sofia, Daniela	Correct the Teacher + conversation correction	Repeated correction breaks fossilization
Modal + verb: "could did", "could found"	Miguel	Correct the Teacher + conversation correction	Hearing the error in a story trains self-detection

Noun/adjective/verb: "patience"/"patient", "afraid"/"fear", "confident"/"confidence", "sale"/"sell"	Miguel, Daniela	Module 11 exercises + correction	Direct teaching of pairs + real-time correction
Passive overuse: "will be disappeared"	Sofia	Correct the Teacher + correction	Teaches WHEN passive is wrong, not just when it is right
Plurals: "millions of life"	Sofia	Conversation correction	"No. Listen. Millions of LIVES." Every time.
Run-on sentences / confused structure	Sofia, Daniela	Shadowing + Project writing feedback	Shadowing teaches natural pause rhythm. Writing feedback teaches where to break sentences.
Irregular participles: "have brought" not "brought"	Daniela	Correct the Teacher + conversation correction	Irregular verbs must be corrected every time: "No. Listen. Have BROUGHT."
This/these + subject-verb agreement: "this generations", "work create"	Daniela	Conversation correction	"No. Listen. THESE generations." "Remote work CREATES." Quick, immediate.

Every skipped activity is a missed opportunity to fix a documented error. These are not theoretical — they come directly from the students' own exams.

THE ERROR PAPER ISSUE

Callan has consistently reported that there are no errors and that error correction is not necessary.

The students' exam papers tell a different story. Below is a direct comparison between what the teacher reports and what the exams document:

Teacher Report	Student Exam Evidence
No errors to report.	Miguel writes "depends of" (should be ON), "could did" (should be DO), "patience" instead of "patient", "thanks of" (should be TO)
Correction is not necessary.	Sofia writes "millions of life" (should be LIVES), "will be disappeared" (should be DISAPPEAR), "responsible of" (should be FOR)
Students are understood.	Being understood is A2 level. B2 standard is accuracy, not just comprehension. These students are paying for B2.

There are two possible explanations:

- 1. The teacher is not detecting the errors in conversation.** This is possible if students are not being pushed to produce extended speech, or if the teacher is listening for meaning rather than accuracy. A native speaker hears "depends of" and understands the meaning — but a teacher should hear it and correct it.
- 2. The teacher detects the errors but does not consider them important enough to correct.** This reflects the "if they are understood, it is fine" philosophy. This philosophy is appropriate for casual conversation. It is NOT appropriate for a paid B2 English course where students expect to reach accuracy, not just intelligibility.

Coordination must verify: Sit in on a class (even 30 minutes). Listen for these specific errors: prepositions (of/on/for/to), modal + verb forms, noun/adjective confusion, passive overuse, plurals. Count how many you hear. Count how many Callan corrects. If the ratio is low, the issue is confirmed. If Callan IS correcting and coordination does not hear the errors, then the exams may reflect test anxiety rather than classroom production.

COORDINATION: ITEMS TO VERIFY BEFORE MEETING WITH CALLAN

Before discussing this report with Callan, coordination must verify the following. Check each item and note the answer:

#	Question to Verify	How to Check	Answer
1	Did Callan do Correct the Teacher in Classes 13-18?	Ask Callan directly. Check if error papers from those classes exist.	

2	Did Callan do Shadowing in Classes 13-18?	Ask Callan. He previously said he does not do Shadowing.	
3	During Project Workshop: did Callan READ what students wrote and give specific corrections?	Ask Callan: "When you read their project writing, what errors did you correct?" Ask students in interviews.	
4	Does Callan correct errors during free conversation? How often?	Ask students: "Does Callan correct you when you speak?" Sit in on one class if possible.	
5	How many error papers has Callan delivered to coordination from Classes 12-18?	Check coordination records. Count them. If fewer than 7, there is a problem.	
6	Do students have project drafts in progress? How advanced are they?	Check the stored project materials at the academy. Are there 6 drafts? How long are they?	
7	Which specific activities did Callan skip or modify?	Compare the class reports (if submitted) with the guides. Ask Callan which activities he changed.	

Complete this checklist BEFORE the meeting with Callan. The answers will determine whether the issue is: (A) Callan is following guides but not correcting enough, (B) Callan is skipping activities, or (C) Callan is doing everything but students still need more time. Each scenario requires a different response.

WHAT NEEDS TO CHANGE IN THE REMAINING WEEKS

Non-negotiable requirements for every remaining class:

- 1. Error paper with 10+ errors per class.** If you finish a 4-hour class with fewer than 10 errors written down, you were not listening. 6 students speaking for 3+ hours WILL produce errors. Write them ALL.
- 2. Correct EVERY error you hear — in the moment.** "No. Listen." + correct version + student repeats. Every time. Not just during activities — during all conversation, all the time. This is the single most important thing you do as a teacher.
- 3. "Correct the Teacher" twice per week.** This activity trains error detection. The stories should include the specific errors your students make. If they say "depends of" — put "depends of" in the story. Make it personal and relevant.
- 4. No activity is optional.** The class guide is the class. If an activity feels boring, bring more energy to it — don't skip it. A boring delivery of a good activity is a teacher problem, not an activity problem.
- 5. Project Workshop every class (25 min).** Students have a final presentation in weeks. Walk to each student individually. Read their work. Correct their errors IN the written work. This is where you can catch prepositions, modals, and noun/adjective confusion before they say them aloud.

The Bottom Line: The students ARE improving — the numbers prove it. But they don't FEEL it because their production errors persist. Those errors persist because they are not being corrected consistently. The activities in the guide exist to fix exactly this. Skipping them is not a neutral choice — it is actively allowing errors to become permanent. The remaining weeks are the last chance to break the cycle before these students leave.
